STI STOPPER DOME

Prevents vandalism or misuse to sounders/speakers and strobe signal units.

This tough cover with advanced features is designed to provide maximum protection for the smaller sounder, speaker and strobe signal units of the new generation of fire protection systems.

Moulded in clear, thick polycarbonate material, the cover is suitable for flush mount installations. A variety of spacers are available to accommodate surface applications. STI offers circular back boxes as well as an appliance mounting plate that eliminates the need for an electrical outlet. The cover can also be fitted with a gasket to protect the device from the external elements. The STI 1229 is NEMA 4X rated.
